WHAT DO I NEED TO KNOW?

January and February goals are think first, plan, conceptualize, talk it over. Then in March you can we are full speed ahead. One of the best advantages of this year is Mars showing up direct all year long! This gives us more energy and less blocks when we are tapping into motivation and momentum. May could create a need for transformation, and is calling you to face the music. Begin to take it slower in the last half of the year, get as much done as you can this spring. Stay structured in your reflections and try not to pull yourself offtrack in July, as confusion could thicken here.

October through November we'll see a high number of planets retrograde, which is typical. When Venus or Mercury go retrograde exes can come out of the woodwork, you will need to carefully revisit why it didn't work out in the first place to determine whether it's worth another shot.

Retrogrades are a great time to take it slow and steady. Think of "Re-" words, you'll most likely be **reviewing, revising, revisit, remind, re-think, re-do, reflect, re-schedule, renovate**, etc.
These transits force all of us to go against the flow, look back, make adjustments and finalizations, so we can move forward with a mature level of clarity and confidence. Although sometimes challenging, retrogrades help us to be thorough and to develop a better us!
